

THE WAY OF Byakko

LITEPAPER - JAN MMXXII

BYAKKO-TOKEN.IO

WHAT IS BYAKKO

Byakko is aiming to be the first ever token on BSC which will successfully bridge to ETH on a CertiK audited ECC fork built by the ECC team.

With integrated NFTs able to be staked, as well as a broad range of investment solutions such as bonding, staking, and much more with amazing APY's, there is much planned for the Byakko holders.

Byakko will be constantly making sure that it keeps a steady back floor price, with the treasury funds that are funded through bonding, tax, and as well as NFT sales.

This will also include reducing APY, a supply halt, and heavy marketing.

WHO WE ARE

A team of professional developers paired with expert marketers within the BSC space, As well as a joint partnership with EmpireDEX.

Byakko is comprised of members from various successful projects which includes the ones listed below:

Numerous team members from Kabosu
Numerous team members from Olympus
Mohamed, the previous CMO of MicroPets,
DogeDash, and Dogemongo

As well as many other tokens from the broad ecosystem of BSC.

TOKENOMICS (8,8)

There will be a tax of 8% on buy
and 8% on sell.

This percentage will be divided into:

- 2% added to liquidity (Will help sustain a stable LP to Price ratio)
- 1% into reflections (Constant reflections, even when APYs are halted, you still make money on your tokens)
- 1% to burn address (Will burn constant supply, making the token deflationary)
- 4% into development fees (Treasury funds, marketing, development work, etc)

ROADMAP

As we launch the token, segments of the roadmap will be released. Below is a quick summary of Phase 1:

ECC Partnership, CertiK audited contract deployment and launch

NFT Mystery Box Deployment - Phase one, 3 Different levels

NFT Staking Pool Generation

Active Tiger Tactic Marketing

Twitter Trending with active influencers

Active News Article listings, Yahoo, Crypto.com, MarketWatch, and more.

In-Depth plan for P2E Game, structural planning
